Description

This beautifully crafted soup can lamp demonstrates the hidden value in household waste. The design was inspired by its predecessor the tin can light (<http://www.co-product.org/component/mtree/metal/tin-can-light>) which saw the tin can and bicycle spokes used to

construct the lamp treated with sand blasting and powder coating; whereas the soup can lamp demonstrates a more honest demonstration of used waste with no finish applied. It has been made using the same method of construction and use of the same components.
